WARNING: FIRE OR EXPLOSION HAZARD
Failure to follow safety warnings exactly could result in serious injury, death, or property damage.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
- WHAT TO DO IF YOU SMELL GAS
  • Do not try to light any appliance.
  • Do not touch any electrical switch; do not use any phone in your building.
  • Leave the building immediately
  • Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
  • If you cannot reach your gas supplier, call the fire department.
- Installation and service must be performed by a qualified installer, service agency or the gas supplier.

HOT GLASS WILL CAUSE BURNS
DO NOT TOUCH GLASS UNTIL COOLED
NEVER ALLOW CHILDREN TO TOUCH GLASS

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at-risk individuals.

This appliance may be installed in an aftermarket, permanently located, manufactured home (USA only) or mobile home, where not prohibited by local codes. This appliance is only for use with the type of gas indicated on the rating plate. A conversion kit is supplied with the appliance.

INSTALLER: Leave this manual with the appliance. CONSUMER: Retain this manual for future reference. French language manuals at travisindustries.com Manuels de langue Française à travisindustries.com
Introduction

Overview
This manual details the installation requirements for the 564 GS2 fireplace. For operating and maintenance instructions, refer to the 564 GS2 Owner's Manual.

Listing Details
This appliance was listed to ANSI Z21.88. The listing label is attached to the appliance near the gas control valve. A copy is shown to the right.

Massachusetts Approval
This manual has been submitted to the Massachusetts Board of State Examiners of Plumbers and Gas Fitters

National Fireplace Institute
We suggest that our gas hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Gas Specialists.

Safety Precautions

Safety Warnings

- Failure to follow all of the requirements may result in property damage, bodily injury, or even death.

Young children should be carefully supervised when they are in the same room as the appliance. Toddlers, young children and others may be susceptible to accidental contact burns. A physical barrier is recommended if there are at risk individuals in the house. To restrict access to a fireplace or stove, install an adjustable safety gate to keep toddlers, young children and other at risk individuals out of the room and away from hot surfaces.

Children and adults should be alerted to the hazards of high surface temperature and should stay away to avoid burns or clothing ignition. Do not touch the hot surfaces of the heater. Educate all children of the danger of a high-temperature heater.

Due to the high temperature, the heater should be located out of traffic and away from furniture and draperies.

- This unit must be installed by a qualified installer to prevent the possibility of an explosion.
- This appliance must be installed in accordance with all local codes, if any; if not, in U.S.A. follow ANSI Z223.1 and NFPA 54(88), in Canada follow CSA B149.1.
- A manufactured home (USA only) or mobile home OEM installation must conform with the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280, or, when such a standard is not applicable, the Standard for Manufactured Home Installations, ANSI/NCSBCS A225.1, or Standard for Gas Equipped Recreational Vehicles and Mobile Housing, CSA Z240.4. This appliance may be installed in Manufactured Housing only after the home is site located.
- All exhaust gases must be vented outside the structure of the living-area. Combustion air is drawn from outside the living-area structure. The venting must not be connected to a chimney flue serving a separate solid-fuel burning appliance.
- Notify your insurance company before hooking up this fireplace.
- The instructions in this manual must be strictly adhered to. Do not use makeshift methods or compromise in the installation. Improper installation will void the warranty and safety listing.
- This heater is approved for use with natural gas (NG) or propane (LP). Burning the incorrect fuel will void the warranty and safety listing and may cause an extreme safety hazard. Direct questions about the type of fuel used to your dealer.
- Contact your local building officials to obtain a permit and information on any installation restrictions or inspection requirements in your area.
- If the flame becomes sooty, dark orange in color, or extremely tall, do not operate the heater. Call your dealer and arrange for proper servicing.
- It is imperative that control compartments, screens, or circulating air passageways of the heater be kept clean and free of obstructions. These areas provide the air necessary for safe operation.
- Do not operate the heater if it is not operating properly in any fashion or if you are uncertain. Call your dealer for a full explanation of your heater and what to expect.
- Do not store or use gasoline or other flammable liquids in the vicinity of this heater.
- Do not operate if any portion of the heater was submerged in water or if any corrosion occurs. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.
Safety Precautions

Safety Warnings (continued)

- Because this heater can be controlled by a thermostat there is a possibility of the heater turning on and igniting any items placed on or near the appliance.
- Light the heater using the built-in igniter. Do not use matches or any other external device to light your heater.
- Never remove, replace, modify or substitute any part of the heater unless instructions are given in this manual. All other work must be done by a trained technician. Don't modify or replace orifices.
- The viewing glass should be opened only for conducting service.
- Allow the heater to cool before carrying out any maintenance or cleaning.
- Operate the heater according to the instructions included in this manual.
- If the main burners do not start correctly turn the gas off and call your dealer for service.
- This unit is not for use with solid fuel.
- Do not place anything inside the firebox (except the optional artwork).
- **Warning:** Do not operate appliance with the glass front removed, cracked or broken. Replacement of the glass should be done by a licensed or qualified service person.
- Do not throw this manual away. This manual has important operating and maintenance instructions that you will need at a later time. Always follow the instructions in this manual.
- Instruct everyone in the house how to shut gas off to the appliance and at the gas main shutoff valve. The gas main shutoff valve is usually next to the gas meter or propane tank and requires a wrench to shut off.
- A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at-risk individuals.
- If the barrier becomes damaged, the barrier shall be replaced with the manufacturer's barrier for this appliance.
- Clothing or other flammable material should not be placed on or near the appliance.
- Any safety screen, guard, or barrier removed for servicing an appliance must be replaced prior to operating the appliance.
- Installation and repair should be done by a qualified service person. The appliance should be inspected before use and at least annually by a professional service person. More frequent cleaning might be required due to excessive lint from carpeting, bedding material, etc. It is imperative that control compartments, burners, and circulating air passageways of the appliance be kept clean.
- **Travis Industries, Inc. grants no warranty, implied or stated, for the installation or maintenance of your heater, and assumes no responsibility of any consequential damage(s).**

Proposition 65 Warning: Fuels used in gas, woodburning or oil fired appliances, and the products of combustion of such fuels, contain chemicals known to the State of California to cause cancer, birth defects and other reproductive harm.

California Health & Safety Code Sec. 25249.6

Travis Gas Fireplaces, Stoves, and Inserts are protected by one or more of the following patents; U.S. 8,469,021, 7,066,170, 6,602,068, 6,443,726, 6,953,037; Canada 2755517 as well as other U.S. and Foreign Patents pending.

* Heating capacity will vary with floor plan, insulation, and outside temperature.

** Efficiency rating is a product thermal efficiency rating determined under continuous operation independent of installed system.

Dimensions

Top Vent Configuration

- 8" (203mm) Diameter Vent
- 4-3/4" (121mm)
- 31-3/4" (794mm)
- 32-3/4" (832mm)
- 36-1/4" (921mm)

Rear Vent Configuration

- 8" (203mm) Diameter Vent
- 33-1/4" (845mm)
- 30-1/4" (768mm)
- 28-3/4" (730mm)
- 24-1/4" (616mm)

* See "Clearances" and "Framing Dimensions" for details.

Weight: 155 Lbs. (70.5kg)
**Packing List**
- Propane Conversion Kit
- Log Set
- Firestop (sku 250-00747)

**Additional Items Required**
- Direct Vent
- Gas Line Equipment (shutoff valve, pipe, etc.)
- Electrical Equipment (min. 14 gauge, grounded line)

**Installation Overview**
- All requirements below must be met.

**Top Vent Configuration**

**Recommended Installation Procedure**
- Frame the opening for the fireplace. Make sure to allow for vent installation.
- This fireplace is designed to accommodate 1/2" (13mm) or 5/8" (16mm) drywall (see "Nailing Brackets" on page 18 for details). Secure the fireplace to the framing.
- Install the vent, gas line and electrical hook-up.
- Install the drywall.
- Install the hearth (if applicable).
- Install the facing (if applicable).
- Install the mantel (if applicable).
- Finalize the installation (see page 48) and install the grill or face.
Massachusetts Requirements

NOTE: The following requirements reference various Massachusetts and national codes not contained in this document.

Requirements for the Commonwealth of Massachusetts

For all side wall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

Installation of Carbon Monoxide Detectors

At the time of installation of the side wall horizontal vented gas fueled equipment, the installing plumber or gasfitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gasfitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors.

In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.

In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

Approved Carbon Monoxide Detectors

Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2034 listed and IAS certified.

Signage

A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, “GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS”.

Inspection

The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08(2)(a)1 through 4.

Exemptions

The following equipment is exempt from 248 CMR 5.08(2)(a)1 through 4:

• The equipment listed in Chapter 10 entitled “Equipment Not Required To Be Vented” in the most current edition of NFPA 54 as adopted by the Board; and

• Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

MANUFACTURER REQUIREMENTS

Gas Equipment Venting System Provided

When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:

• Detailed instructions for the installation of the venting system design or the venting system components; and

• A complete parts list for the venting system design or venting system.

Gas Equipment Venting System NOT Provided

When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies “special venting systems”, the following requirements shall be satisfied by the manufacturer:

• The referenced “special venting system” instructions shall be included with the appliance or equipment installation instructions; and

• The “special venting systems” shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.

See Gas Connection section for additional Commonwealth of Massachusetts requirements.
Top Stand-Off Assembly

The top stand-offs must be assembled prior to installation.

Warning: You must follow the instructions below to elevate both standoffs. Failure to do so will result in an extreme fire hazard.

The standoffs are shipped in the flat position. Make sure to follow the instructions below before installing the fireplace.

- Bend the standoff in the numbered sequence shown above.
- Remove the screw below the standoff.
- Replace the screw to secure the standoff.

1/4" Nutdriver
**Top Vent or Rear Vent Configuration**

This appliance is shipped in the top vent configuration. To change to the rear vent configuration, follow the directions below.

**NOTE:** the vent configuration affects several aspects of installation (framing, maximum vent rise, maximum vent run). Make sure the vent configuration is correct prior to installation. You may wish to configure the diffuser when changing the vent configuration.

**NOTE:** Use a magnetic-tipped nutdriver on these screws - take care to prevent the screws from falling into the fireplace.

1. Remove the 4 screws securing the exhaust cover plate. Verify the gasket on the cover plate is in place, then attach it to the upper exhaust port with the same screws.
2. Remove the 4 screws securing the outer flue assembly. Place the screws and assembly aside.
3. Remove the 4 screws securing the inner flue assembly. Place the screws and assembly aside.
4. Remove the 4 screws securing the intake cover plate. Place the screws and cover plate aside.
5. Remove the 4 screws securing the exhaust cover plate. Verify the gasket on the cover plate is in place, then attach it to the upper exhaust port with the same screws.
Converting the Fireplace to Rear Vent Configuration (continued)

Verify the gasket on the intake cover plate is in place, then attach it to the top of the fireplace using the screws removed earlier.

Tuck the insulation (included in the rear vent conversion kit) into the area above the exhaust manifold. NOTE: The longer edge goes side to side. The insulation must be placed so it covers the entire area over the exhaust manifold.

Verify the gasket on the inner flue assembly is in place, then attach it to the exhaust port using the screws removed earlier.

Attach the heat shield (included with the fireplace) to the top of the fireplace. Use the screws pre-attached to the top of the fireplace.

Make sure the heat shield is properly formed (bend the mounting legs as shown).

Verify the gasket on the outer flue assembly is in place, then attach it to the fireplace using the screws removed earlier.
Fireplace Placement Requirements

- Fireplace must be installed on a level surface capable of supporting the fireplace and vent
- Fireplace must be placed directly on wood or non-combustible surface (not on linoleum or carpet)
- This heater may be placed in a bedroom. Please be aware of the large amount of heat this appliance produces when determining a location.

Clearances

- The fireplace requires a 1/2" (13mm) clearance from the angled sides and back of the fireplace to the framing members. No material (insulation, framing, etc.) may be placed into this area.
- When installed, walls in front of the fireplace must be a minimum 1" (25mm) to the side of the fireplace.
- Due to the high temperature, the heater should be located out of traffic and away from furniture and draperies.
- Fireplace must be placed so the vents below and above the glass do not become blocked.

Raised Fireplaces

- The fireplace (and hearth, if desired) may be placed on a platform designed to support the fireplace (155 Lbs. 70 Kg) and vent.
- The base of the fireplace must be a minimum 70" (1778mm) below the room ceiling.
Televisions Placed Above the Fireplace

The following section details three methods to allow for television installation above the fireplace.

Using a Mantel Between the Fireplace and Television

IMPORTANT NOTE REGARDING TELEVISIONS AND THIS FIREPLACE
Most television manufacturers instruct the homeowner to not place the television above a heat source. Doing so may negatively affect the longevity of the television and may negate the warranty. If you do place a television above the fireplace, please be aware of the large amount of heat generated by the fireplace and consider placing the television above a mantel to reduce the amount of heat that reaches the television. The homeowner must understand that Travis Industries does not take responsibility for any negative impact to televisions placed near this fireplace.

Minimum Dimensions:

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Measurement</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a) Minimum Mantel Height above Base of Fireplace*</td>
<td>37.5” (953mm) with 8” (203mm) mantel depth</td>
</tr>
<tr>
<td>(b) Mantel Depth*</td>
<td>Minimum 8” (203mm)*</td>
</tr>
</tbody>
</table>

*Mantel depth is 8” minimum to allow heat to travel forward and dissipate. If using more than an 8” mantel, make sure to make the mantel height (a) higher (see mantel requirements on page 45 for details).

**NOTE:** The mantel must extend 2” in front of the TV and 1” to both sides. If you have a TV that is greater than 6” deep (including the 1” gap behind), you will need to alter the mantel depth and height.

**WIRING NOTE:** If running wiring into the enclosure, use thermal insulating wrap around the wiring. Secure the wiring to protect from contact with hot surfaces.
Using a Buildout Above Fireplace and Television

**IMPORTANT NOTE REGARDING TELEVISIONS AND THIS FIREPLACE**
Most television manufacturers instruct the homeowner to not place the television above a heat source. Doing so may negatively affect the longevity of the television and may negate the warranty. If you do place a television above the fireplace, please be aware of the large amount of heat generated by the fireplace and consider placing the television above a mantel to reduce the amount of heat that reaches the television. The homeowner must understand that Travis Industries does not take responsibility for any negative impact to televisions placed near this fireplace.

**Minimum Dimensions:**

(a) Minimum Buildout Height above Base of Fireplace* 37.5” (953mm) with 8” (203mm) buildout depth
(b) Minimum Fireplace/TV Buildout Depth* Minimum 8” (203mm)*
(c) Fireplace Buildout Width 38.25” (972mm)

*Buildout depth is 8” minimum to allow heat to travel forward and dissipate. If using more than an 8” buildout, make sure to make the buildout height (a) higher (buildout must meet mantel requirements - see page 45 for details).

**NOTE:** The buildout must extend 2” in front of the TV and 3” to both sides and top. If you have a TV that is greater than 6” deep (including the 1” gap behind), you will need to alter the buildout depth and height.

**WIRING NOTE:** If running wiring into the enclosure, use thermal insulating wrap around the wiring. Secure the wiring to protect from contact with hot surfaces.
Using a Buildout Below a Television

**IMPORTANT NOTE REGARDING TELEVISIONS AND THIS FIREPLACE**

Most television manufacturers instruct the homeowner to not place the television above a heat source. Doing so may negatively affect the longevity of the television and may negate the warranty. If you do place a television above the fireplace, please be aware of the large amount of heat generated by the fireplace and consider placing the television above a mantel to reduce the amount of heat that reaches the television. The homeowner must understand that Travis Industries does not take responsibility for any negative impact to televisions placed near this fireplace.

**Minimum Dimensions:**

- (a) Minimum Buildout Height above Base of Fireplace* 37.5” (953mm) with 8” (203mm) buildout depth
- (b) Minimum Buildout Depth* Minimum 8” (203mm)*
- (c) Fireplace Buildout Width 38.25” (972mm)

*Buildout depth is 8” minimum to allow heat to travel forward and dissipate. If using more than an 8” buildout, make sure to make the buildout height (a) higher (buildout must meet mantel requirements - see page 45 for details).

**NOTE:** The buildout must extend 2” in front of the TV and 3” to both sides and top. If you have a TV that is greater than 6” deep (including the 1” gap behind), you will need to alter the buildout depth and height.

**WIRING NOTE:** If running wiring into the enclosure, use thermal insulating wrap around the wiring. Secure the wiring to protect from contact with hot surfaces.
**Minimum Framing Dimensions - Rear Vent Configuration**

**HINT:** place the fireplace so the center line is at least 5" (127mm) from both vertical framing members at the rear (this allows the vent to pass through the framing without modifications).

Route the electrical line to a position to the left rear of the fireplace.

**Minimum 38” (965mm)**

**Fireplace Enclosure Height**

**NOTE:** The Shadowbox face extends 1” below the base of the fireplace.
Minimum Framing Dimensions - Top Vent Configuration

Route the electrical line to a position to the left rear of the fireplace.

Minimum enclosure height = 38" (965mm)

**NOTE:** The Shadowbox face extends 1" below the base of the fireplace.
Nailing Brackets

There are four nailing brackets on the front of the fireplace. Follow the directions below to prepare the nailing brackets. Once in place, nail or screw the nailing brackets to the framing.

NOTE: Additional nailing brackets are provided along the base of the fireplace. Use these brackets if not using the front brackets.

WARNING: Make sure the fireplace is square and plumb when placed in the framing. Measured corner-to-corner, the fireplace should be square (approx. 47-1/8" (1197mm) for each dimension). Use shims to insure the fireplace is square.

1/2" (13mm) Drywall

For installations using 1/2" (13mm) facing fold the larger tab out 90° (use a screwdriver if necessary).

5/8" (0.625mm) Drywall

For installations using 5/8" (0.625mm) drywall fold the shorter tab out 90° (use a screwdriver if necessary).
Corner Installations - Rear Vent Configuration

A typical 45° installation uses the framing dimensions shown in the illustration below (NOTE: all clearances still apply).

**NOTE:**
Most installations use:

- 6" (152mm) Section for 2x6 (51mm X 152mm) Walls
- 4" (102mm) Section for 2x4 (51mm X 102mm) Walls
- 45-3/4" Min. 1163mm
Corner Installations - Top Vent Configuration

A typical 45° installation uses the framing dimensions shown in the illustration below (NOTE: all clearances still apply).
Outdoor Fireplace Installations

Travis Industries Inc. gas-fired fireplaces are suitable for installation into outdoor areas protected from direct water impingement. In addition to maintaining listed mantel and combustibles clearances, a rain protection overhang factor of 1/2 shall be constructed to the front and to each side of installed appliances (see the illustration to the right). All wiring connections to line power shall be in accordance with outdoor requirements of NECA NFPA 70.

**Warnings Regarding Tempered Glass**

This fireplace uses tempered glass which is susceptible to thermal shock. Take care to prevent water from contacting the fireplace, especially if it is hot.

The overhang (A) must extend at least 1/2 the roofline height (B). Height is measured from the base of the fireplace.

For example: if the rooline (B) is 8' above the base of the fireplace, the overhang (A) must be at least 4'.
Gas Line Requirements

**MASSACHUSETTS INSTALLATIONS - WARNING:**

This product must be installed by a licensed plumber or gas fitter when installed within the Commonwealth of Massachusetts.

**OTHER MASSACHUSETTS CODE REQUIREMENTS:**

- Flexible connector must not be longer than 36 inches.
- Shutoff valve must be a “T” handle gas cock.
- Only direct vent sealed combustion products are approved for bedrooms or bathrooms.
- Fireplace dampers must be removed or welded in the open position prior to the installation of a fireplace insert or gas log.
- A carbon monoxide (CO) detector is required in the same room as the appliance.

- The gas line must be installed in accordance with all local codes, if any; if not, follow ANSI 223.1 and the requirements listed below.
- The fireplace and gas control valve must be disconnected from the gas supply piping during any pressure testing of that system at test pressures in excess of 1/2 psig. For pressures under 1/2 psig, isolate the gas supply piping by closing the manual shutoff valve.
- Leak test all gas line joints and the gas control valve prior to and after starting the fireplace.

**Fuel**

- This fireplace is designed either for natural gas or for propane (but not for both). Check the sticker on the top of the gas control valve to make sure the correct fuel is used.

**Gas Line Connection**

- Installation must be performed by a qualified installer, service agency or the gas supplier (in Massachusetts a licensed plumber/gasfitter).

**Gas Inlet Pressure**

<table>
<thead>
<tr>
<th>Gas Type</th>
<th>Max. Input Pressure</th>
<th>Min. Input Pressure</th>
<th>Max. Manifold Pressure</th>
<th>Min. Manifold Pressure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Natural Gas</td>
<td>7” W.C. (1.74 kPA)</td>
<td>5.5” W.C. (1.37 kPA)</td>
<td>3.5” W.C. (0.87 kPA)</td>
<td>1.6” W.C. (0.40 kPA)</td>
</tr>
<tr>
<td>Propane</td>
<td>13” W.C. (3.23 kPA)</td>
<td>11” W.C. (2.74 kPA)</td>
<td>11” W.C. (2.74 kPA)</td>
<td>2.9” W.C. (0.72 kPA)</td>
</tr>
</tbody>
</table>

- If the pressure is not sufficient, make sure the piping used is large enough, the supply regulator is adequately adjusted, and the total gas load for the residence does not exceed the amount supplied.
- The supply regulator (the regulator that attaches directly to the residence inlet or to the propane tank) should supply gas at the suggested input pressure listed above. Contact the local gas supplier if the regulator is at an improper pressure.

**Directions for Connecting a Gas Pressure Test Gauge**

The gas control valve (shown to the right) has two test ports for testing input (line pressure) and output (manifold pressure). Loosen the brass screw on either test port and place a 5/16” i.d. rubber or plastic tube over the tapered test port. Connect the tube to the test gauge.

**WARNING:** The brass screw must be tightened after testing to prevent gas leakage.
Gas Line Location

**NOTE FOR RIGID PIPE:** When using rigid pipe, you may wish to disconnect the shutoff valve from the fireplace and route the pipe through the fireplace wall. First, disconnect the gas line from the shutoff valve (see step 1 below). Then remove the shutoff valve from the cover plate (4 screws outside fireplace). The pipe may be routed through the cover plate and the shutoff valve and gas line may be re-attached inside the fireplace.

### Right Side Gas Line (Stock)

- 3" (77mm) Above Base
- 10-1/4" 261mm
- 15 Degrees

### Left Side Gas Line

- 3" (77mm) Above Base
- 15 Degrees

### Converting Gas Line to the Left Side

1. Disconnect the gas line from the shutoff valve (3/4" wrench). Gas line is located inside the fireplace on the right side.

2. Remove the screw that holds the shutoff valve plate in place (1/4" nutdriver). Remove the shutoff valve plate.

3. Remove the cover plate from the left side of the fireplace (it is held in place in the same fashion as the shutoff valve plate). Attach it to the right side of the fireplace.

4. Attach the shutoff valve plate to the left side of the fireplace. Route the gas line to the left side and re-attach the gas line to the shutoff valve. Make sure to leak test the entire gas line.
**Electrical Connection (required)**

- The electrical line to the grounded receptacle inside the fireplace must be installed by a qualified installer and must meet all local codes.
- Make sure the household breaker is shut off prior to working on any electrical lines.
- The appliance, when installed, must be electrically grounded in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70, or the Canadian Electrical Code, CSA C22.1.
- The electrical line must be a min. 14 gauge, and supply 120 Volts at 60 Hz (2 Amps).

**Caution:** Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.
Optional Wall Switch or Thermostat Installation

Do not connect 110-120 VAC to the gas control valve or wiring system of this fireplace. The switch and wiring must be installed by a qualified installer.

This fireplace includes an optional wall switch (with wire) to operate the fireplace burner without accessing the internal on/off switch. A thermostat may be used instead.

Route the wire from inside the fireplace, through the grommet on either side of the fireplace near the gas inlet (see at right) to the switch. The wall switch (or thermostat) may bypass the fireplace on/off switch or be installed in parallel or series configuration (see below).

**Caution:** Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.

**Note:** When using a GreenSmart™ remote, use the receiver for on/off operation (do not use a wall switch or thermostat).

**Warning:** Make sure all wiring is secure and does not contact hot or moving components.

### Parallel Connection

<table>
<thead>
<tr>
<th>Thermostat / External Switch</th>
<th>On / Off Switch</th>
<th>On / Off Switch</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ON</strong></td>
<td><strong>ON</strong></td>
<td><strong>OFF</strong></td>
</tr>
<tr>
<td>Heater is <strong>ON</strong></td>
<td>Heater is <strong>ON</strong></td>
<td></td>
</tr>
</tbody>
</table>

**To wire the heater in parallel,** follow the directions below:

- **a**
  - On / Off Switch
- **b**
  - Thermostat (or External Switch) Wires
- **c**
  - Thermostat (or External Switch) Wires

### Series Connection

<table>
<thead>
<tr>
<th>Thermostat / External Switch</th>
<th>On / Off Switch</th>
<th>On / Off Switch</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ON</strong></td>
<td><strong>ON</strong></td>
<td><strong>OFF</strong></td>
</tr>
<tr>
<td>Heater is <strong>ON</strong></td>
<td>Heater is <strong>OFF</strong></td>
<td></td>
</tr>
</tbody>
</table>

**To wire the heater in series,** follow the directions below:

- **a**
  - On / Off Switch
- **b**
  - Thermostat (or External Switch) Wires
- **c**
  - Thermostat (or External Switch) Wires
**Vent Requirements**

- The gas appliance and vent system must be vented directly to the outside of the building, and never be attached to a chimney serving a separate solid fuel or gas-burning appliance. Each direct vent gas appliance must use its own separate vent system.
- In addition to the requirements listed here, follow the requirements provided with the vent.
- A firestop is required whenever the vent penetrates a wall, floor, or ceiling (passes through framing members). Horizontal vent less than 48" (1219mm) above the fireplace must use the Travis Firestop (sku 250-00747 - it incorporates a 4" (102mm) clearance above, 1" (25mm) clearance below and to the sides of the vent). Other penetrations only require a 1" (25mm) clearance and may use a standard firestop (make sure the required 1" (25mm) clearance is met).
- Always use the high-wind termination (if available from the vent manufacturer).

**Vent Clearances**

- The vent must maintain the required clearance to combustible materials to prevent a fire. Do not fill air spaces with insulation.

<table>
<thead>
<tr>
<th></th>
<th>Before 48&quot; (1219mm)</th>
<th>After 48&quot; (1219mm)</th>

</tr>
<tr>
<td>Below Horizontal or 45° Section</td>
<td>1&quot; (25mm)</td>
<td>1&quot; (25mm)</td>
</tr>
</tbody>
</table>

**Altitude Considerations**

- This heater has been tested at altitudes ranging from sea level to 6,000 feet (1800M). In this testing we have found that the heater, with its standard orifice, burns correctly with just an air shutter adjustment.
- Failure to adjust the air shutter properly may lead to improper combustion which can create a safety hazard. Consult your dealer or installer if you suspect an improperly adjusted air shutter.
Approved Vent

- Rear vent configurations use 8" (203mm) diameter Simpson Dura-Vent Model Direct-Vent Pro (or GS)*.
  * Other vent may be approved with this fireplace. Check with the vent manufacturer for details.

- Top vent configurations use 8" (203mm) or 6-5/8" (168mm) diameter Simpson Dura-Vent Direct-Vent Pro (or GS)*. If using 6-5/8" (168mm) diameter vent, attach the 8" (203mm) to 6-5/8" (168mm) reducer (Travis part # 98900165) to the fireplace.

**NOTE:** When using 6-5/8" (168mm) diameter vent, make sure to accommodate the 4" (102mm) clearance above the vent for the first 48" (1219mm) of rise (see vent clearances on page 26). Standard firestops do not include this clearance.

- Always use the high-wind cap (or high-wind sconce cap, part # 58DVA-HSCH or 46DVA-HSCH).
- Installation instructions for Simpson Dura-Vent may be found at www.duravent.com

Vent Installation

- Slide the vent sections together and turn 1/4 turn until the sections lock in place.
- Screws are not required to secure the vent. However, three screws may be used to secure vent sections together if desired.
- High temperature sealant is recommended at the appliance starter section connection (use high-temperature silicone or Mill-Pac®).
- If disassembly is required, at time of re-assembly check to see if the vent creates a tight fit. If it does not, apply high temperature sealant to the joints of the affected sections.
- Horizontal sections require a 1/4" (6mm) rise every 12" (305mm) of travel
- Horizontal sections require non-combustible support every three feet (e.g.: plumbing tape)
**Approved Vent Configurations**

**Restrictor Position**
- Intake and exhaust restrictors are built into the appliance to adjust the flow rate of intake air and exhaust gases. Depending upon the vent configuration, you may be required to adjust the restrictor positions. The charts for acceptable vent configurations detail the correct vent restrictor positions.

**Exhaust Restrictor Adjustment**

> If the diffuser is required to be in position # 2, you may wish to adjust the diffuser while the exhaust restrictor is removed.

The exhaust restrictor is shipped in position # 0. If the restrictor is required in a different position, remove the screws, re-position the restrictor (see the illustration below), and replace the screws.

In this example, the restrictor is set in position # 3.
Intake Restrictor Adjustment

Loosen the two screws holding the intake restrictor in place.

1/4" Socket

Position # 1 (open)

Position # 2 (closed)

Slide the restrictor down to the lower position and tighten the screws.
Diffuser Plate Adjustment

Certain vent configurations require the diffuser plate to be adjusted (refer to the approved vent configuration charts for details). Position #1 is stock (bent). Position #2 is flattened. See the directions below to change the diffuser to position #2.

1. Remove the exhaust restrictor.
2. Using a 1/4" nutdriver, remove the diffuser.
3. Bend the round portion of the diffuser so it is flat (position #2).
4. Secure the flattened diffuser plate with the screws removed earlier.
5. Replace the exhaust restrictor (see “Exhaust Restrictor Adjustment” for restrictor settings).
Rear Vent Configuration with Horizontal Termination (no vertical rise)

- The termination must fall within the shaded area shown in the chart. Use the indicated restrictor and diffuser positions.

See the charts below to determine maximum vent

Vent with No 45 Elbow

- Exhaust Restrictor: Remove the exhaust restrictor and replace the screws.
- Intake Restrictor #1 (stock)
- Diffuser Position #1 (stock)
- Min. 4" (102mm) Horizontal Section
- Max. 48" (1.2m) Horizontal Section(s)

Vent with 1 45 Elbow

- Exhaust Restrictor: Remove the exhaust restrictor and replace the screws.
- Intake Restrictor #1 (stock)
- Diffuser Position #1 (stock)
- Min. 4" (102mm) Horizontal Section
- Max. 24" (610mm) Horizontal Section(s)
Rear Vent Configuration with Horizontal Termination (with vertical rise)

- The termination must fall within the shaded area shown in the chart. Use the indicated restrictor and diffuser positions.
- Up to four elbows (45° or 90°) may be used.
- Only one horizontal elbow may be used.

This is considered a horizontal elbow (it does not matter whether it turns right or left). It may be a 90° or 45° elbow.

Horizontal length is calculated by adding both lengths of horizontal run (Horizontal Length = H1 + H2).

This is considered a vertical elbow.
Rear Vent Configuration with Vertical Termination

- The termination must fall within the shaded area shown in the chart. Use the indicated restrictor and diffuser positions.
- Up to four elbows (45° or 90°) may be used.
- Only one horizontal elbow may be used.

Horizontal length is calculated by adding both lengths of horizontal run (Horizontal Length = H1 + H2).

This is considered a horizontal elbow (it does not matter whether it turns right or left). It may be a 90° or 45° elbow.

This is considered a vertical elbow.
Top Vent Configuration with Horizontal Termination

- The termination must fall within the shaded area shown in the chart. Use the indicated restrictor and diffuser positions.
- Up to four elbows (45° or 90°) may be used.
- May use 8" (203mm) or 6-5/8" (168mm) diameter vent (see page for 26 details).
- Only one horizontal elbow may be used.

Horizontal length is calculated by adding both lengths of horizontal run (Horizontal Length = H1 + H2).

This is considered a horizontal elbow (it does not matter whether it turns right or left). It may be a 90° or 45° elbow.

© Travis Industries
Top Vent Configuration with Vertical Termination

- The termination must fall within the shaded area shown in the chart. Use the indicated restrictor and diffuser positions.
- Up to four elbows (45° or 90°) may be used.
- Only one horizontal elbow may be used.
- May use 8" (203mm) or 6-5/8" (168mm) diameter vent (see page for 26 details).

Horizontal length is calculated by adding both lengths of horizontal run 
(Horizontal Length = H1 + H2).

This is considered a horizontal elbow (it does not matter whether it turns right or left). It may be a 90° or 45° elbow.

This is considered a vertical elbow.
Termination Requirements

I. Venting terminals shall not be recessed into a wall or siding.

A. Minimum 4" (229mm) clearance from any door or window
B. Minimum 12" (305mm) above any grade, veranda, porch, deck or balcony
C. Minimum 1" (25mm) from outside corner walls
   **NOTE:** Clearance in accordance with local installation codes and the requirements of the gas supplier.
D. Minimum 1" (25mm) from inside corner walls
   **NOTE:** Clearance in accordance with local installation codes and the requirements of the gas supplier.

E. Minimum 11" (279mm) clearance below unventilated soffits or roof surfaces
   Minimum 18" (457mm) clearance below ventilated soffits
   Minimum 6" (152mm) clearance below roof eaves
   **NOTE:** Vinyl surfaces require 24" (610mm)
   **NOTE:** Clearance in accordance with local installation codes and the requirements of the gas supplier.

F. Minimum 12" (305mm) clearance below a veranda, porch, deck or balcony
   **NOTE:** Permitted only if veranda, porch, deck, or balcony is fully open on a minimum of two sides beneath the floor.
   **NOTE:** Clearance in accordance with local installation codes and the requirements of the gas supplier.

G. Minimum 48" (1219mm) clearance from any adjacent building

H. Minimum 84" (2134mm) clearance above any grade when adjacent to public walkways or driveways
   **NOTE:** may not be used over a walkway or driveway shared by an adjacent building

I. Minimum 9" (229mm) clearance to any nonmechanical air supply inlet to the building or the combustion air inlet to any other appliance.

J. Minimum 36" (914mm) clearance above any mechanical air supply inlet if within 10' (3M) horizontally

K. Minimum 36" (914mm) from the area above the meter/regulator (vent outlet) - this extends 15' (4.5M) above the regulator
   **NOTE:** Clearance in accordance with local installation codes and the requirements of the gas supplier.

L. Minimum 36" (914mm) from the meter/regulator (vent outlet)
   **NOTE:** Clearance in accordance with local installation codes and the requirements of the gas supplier.

M. Minimum 12" (305mm) above the roof line (for vertical terminations)

N. Minimum 24" (610mm) horizontal clearance to any surface (such as an exterior wall) – for vertical terminations

**NOTE:** Measure clearances to the nearest edge of the exhaust hood.

- Use the vinyl siding standoff when installing on an exterior with vinyl siding.
- Vent termination must not be located where it will become plugged by snow or other material
Hearth Requirements

Floor Mounted Fireplaces

Do not build a hearth more than 1” (25mm) above the baseplate (this area must remain clear for the access door).

If installed near carpet or other combustible flooring, the fireplace must be raised so the base of the unit is above the carpet surface or flooring material.

WARNING:
A non-combustible hearth is not required. However, if the heater is installed next to the floor, we recommend a hearth to protect the flooring surface from discoloration or other negative impact from the heater.

Raised Fireplaces

A hearth is not required when the fireplace is raised above the flooring surface.
Facing Requirements

- This appliance is designed to allow for drywall (or other combustible facing) to contact the sides and top of the front of the fireplace.
- Tile or other non-combustible facing may be placed on the front of the fireplace (see "Facing Overview" on page 39 for further details).

Drywall Installation

**Drywall Installation**  
Drywall may be installed up to the front edge of the fireplace. If the fireplace is raised, drywall up to the bottom edge as well.

Do not install drywall (or any other combustible) in front of the fireplace.

**TOP VIEW**

- Framing
- Nailing Bracket
- Drywall
- Drywall
Facing Overview

Upgrade faces are available for this fireplace and may influence facing installation. Consult with your Travis Dealer if you are using an upgrade face.

Optional non-combustible facing may be installed on the fireplace. Use the guidelines below to determine the location (also see the following pages for detailed diagrams.

- **Tile Line**: Any non-combustible facing under 1" (25mm) thick (see "Thin Facing" on page 40).
- **Masonry Line**: Any non-combustible over 1" (25mm) thick (see "Thick Facing" on page 42).
- **Hearth Line**: Non-combustible hearth/facing should be installed up to this location (1" (25mm) above the base of the fireplace). The fireplace may be raised to accommodate thicker hearth materials.

</tbody>
</table>
Thin Facing Installation (tile, marble, or other non-combustible under 1” (25mm) thick)

Upgrade faces are available for this fireplace and may influence facing installation. Consult with your Travis Dealer if you are using an upgrade face.

Do not install tile (or other material) in front of the glass frame, convection channel, or access panel openings. This area must remain open to access internal components and for convection air.

Floor-Mounted Fireplaces or Raised Hearths:
Build the hearth 1” max (25mm) above the base of the fireplace. The fireplace may be raised to accommodate thicker hearth materials.

Raised Fireplaces:
Facing is installed 1” maximum (25mm) above the base of the fireplace.

NOTE FOR FPX FACES:
FPX arched faces require the FPX Face Upgrade Kit (sku 98500683) and a triangular piece of facing in these upper corners. See the instructions included with the face for further details.
Thin Facing Installation (tile, marble, under 1" (25mm) thick) - Side View

**Raised Fireplace (with no Hearth)**

100-01397
Thick Facing Installation (stone, brick, or other non-combustible over 1” (25mm) thick)

If using a Fireplace Xtrordinair (FPX) arched face, see “Thick Facing with a Fireplace Xtrordinair Arched Faces” on page 43.

Do not install masonry (or other material) in front of the fireplace. This area must remain open to install the face.

Floor-Mounted Fireplaces or Raised Hearths:
Build the hearth 1” max (25mm) above the base of the fireplace. The fireplace may be raised to accommodate thicker hearth materials.

Raised Fireplaces:
Masonry is installed 1” (25mm) (maximum) above the base of the fireplace.

NOTE: The nailing brackets are not used for this type of installation - secure the fireplace to the floor with the brackets along the base of the fireplace.
Thick Facing with Fireplace Xtrordinair (FPX) Arched Faces

The following illustration shows facing considerations for those fireplaces utilizing FPX arched faces. The facing must be non-combustible and over 1" (25mm) in depth.

The Fireplace Xtrordinair 564 Masonry Template is recommended for masonry installation (sku 98500674). The template helps locate and support the masonry as it being installed.

Before installing masonry, install the FPX Face Upgrade Kit (98500683). This covers the upper corners.

Mantel Requirements

Combustible Mantels

- Use the table below to determine the maximum mantel depth allowed. The mantel depth (measured from the face of the fireplace) must fall in the shaded portion of the table.
- Any material that protrudes more than 3/4" (19mm) from the non-combustible facing is considered a mantel and must meet the mantel requirements.

Examples:
- If you wish to have a 6" (152mm) deep mantel, it must be at least 37" (940mm) above the base of the fireplace.
- If you wish to have a 2" (51mm) deep breastplate, it must be at least 36" (914mm) above the base of the fireplace.

Non-Combustible Mantels

Non-combustible mantels must meet the clearances listed for combustible mantels. However, if you do wish to reduce the clearances by using a non-combustible mantel, the following requirements must be met:

- Non-combustible mantel and facing must extend from the top of the appliance to the top surface of the mantel.
- A non-combustible header must be used (metal stud).
Installation Example - Build-Out (Dog-House) with Hor. Termination

- The framing, facing, and other building materials depicted below are for example only. Refer to local building codes for framing, facing, and insulating requirements in your area.

Side View

See "Vent Termination" for full requirements.

Horizontal Termination* (make sure all vent clearances are met)

4" (102mm) Section*

Firestop

NOTE FOR 2 x 4 (51mm X 102mm) EXTERIOR WALLS:
When installed with a 2x4 (51mm X 102mm) exterior wall, the termination may not fit flush against the exterior wall. You may wish to place framing around the termination to fill the gap.

Top View

NOTE:
1/2" (13mm) Clearance to sides and back of fireplace.

NOTE:
In colder climates the fireplace may require an insulated enclosure.

NOTE:
If required to use drywall inside the firebox enclosure, make sure to alter the framing accordingly.
Installation Example - Build-In with Horizontal Termination

- The framing, facing, and other building materials depicted below are for example only. Refer to local building codes for framing, facing, and insulating requirements in your area.

NOTE FOR 2 x 4 (51mm X 102mm) EXTERIOR WALLS:

When installed with a 2x4 (51mm X 102mm) exterior wall, the termination may not fit flush against the exterior wall. You may wish to place framing around the termination to fill the gap.

Top View

1/2" (13mm) Clearance to sides and back of fireplace.

NOTE: If required to use drywall inside the firebox enclosure, make sure to alter the framing accordingly.
Steps for Finalizing the Installation

1. Remove the glass (see page 50).
   **NOTE:** If using propane (LP) convert the appliance prior to installing the logs.

2. We recommend you purge the gas line at this time (with the glass removed). This allows gas to be detected once it enters the firebox, ensuring gas does not build up.

3. Make sure the two accent light bulbs are in place.
   **NOTE:** Take care to not touch the bulb with your fingers – use a cloth or paper towel.

4. Install the four AA batteries (included in the owner’s pack) into battery holder (see the illustration below). The AA batteries act as a power backup in case the household (AC) power goes out. Install the 9v battery (included in the owner’s pack) into control panel light assembly (see the illustration below). The battery holder is held in place with Velcro and may be removed for easier access.

5. Install the logs (see page 53).

6. Replace the glass.
7. Start the heater.
8. Leak test all gas joints.
9. Check the air shutter following the directions below.

**Air Shutter Adjustment**

Let the heater burn for fifteen minutes (make sure the logs and glass are in place). The flames should be yellow with no sooting. Adjust the air shutter, if necessary, to achieve the correct looking flame.

10. Turn the flame adjust knob to its highest position - the flames should not contact the top of the firebox. Check the flame on low position. The flames should burn off of each burner hole. If the heater does not work correctly, contact your Travis dealer for a remedy.

11. Give this manual to the home owner for future reference and fully explain operation of this heater. For comprehensive operating and maintenance instructions, refer to the Owner's Manual.

**ACID WASH WARNING:** Before installing the faceplate, make sure any masonry that has been treated with acid wash has been properly neutralized (this is used primarily with brick faces). Acid wash (muriatic acid) is used to remove excess mortar. If not properly neutralized with an ammonia solution, the plated face may develop a permanent tarnish when the acid evaporates over time. Contact your dealer if uncertain your facing has been properly neutralized.
**Barrier Removal**

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at-risk individuals.

- **Warning:** If the barrier becomes damaged, the barrier shall be replaced with the manufacturer’s barrier for this appliance.
- **Tip:** If using a face or grill that requires use of a cove cover, use the cove cover included with the fireplace (see below). Do not use the cover included with face or grill (if applicable).

**HINT FOR REPLACING THE BARRIER:** Hold the barrier at an angle and insert the bottom slots first. Then pivot the barrier forward to engage the top hooks.

If using a face or grill that requires use of a cove cover, place the cove cover in place and bend the tabs down to secure.

Lift the barrier up, pivot the top forward, and remove from the fireplace.
Glass Frame Removal and Installation

Warning: The appliance must be completely cool before removing the glass.
Warning: Do not strike or slam the glass.
Note: Remove the barrier before removing the glass (see previous page). Replace barrier after replacing the glass.

Based upon the face being used, either:
(a) swing the access door down and remove the top grill,
(b) remove the face (unscrew or lift off - see the instructions included with the face for details).

Open the four latches holding the glass frame in place (start with the bottom) - follow the directions shown to the right.

Lift the glass frame up and pull it forward to remove.

NOTE: You may need to lift the glass frame while re-attaching.

Re-Attaching the Glass Frame:

a) Hang the glass frame on the firebox.

b) While holding in place, attach the upper latches (follow the instructions to the right in reverse).

c) Lift the glass frame slightly and attach the lower latches.

NOTE: Make sure the glass frame is all the way in place - it should be flush with the front of the fireplace when installed.
Glass Frame Removal and Installation (continued)

The latch can come loose from glass frame anchor. This occurs when it is turned 1/4 turn when it is disengaged. Follow the directions below to re-install the latch if it becomes loose.

Hold the latch at an angle and insert it into the slot on the glass frame anchor.

Note how the washer on the latch fits behind the flange on the glass frame anchor.

Once fully inserted, turn the latch until it is upright.
Log Set Installation

Log Set Overview

When installed, the logs should appear as shown below.
Rear Log Installation

The rear log has a flat notch on both sides that center it on the grate.

Place the rear log on the grate and slide it all the way back until the log contacts the end-brackets on the grate.
Right Log Installation

The right log has a groove that fits over the grate.

Note how the right side of the log rests on the burner but does not cover any burner holes.
Left Log Installation

The left log has a groove that fits over the grate.

Note how the right side of the log rests on the burner but does not cover any burner holes.
Left Twig Installation

This hole fits over the pin on the rear log.

The left twig should be positioned so the front edge contacts the grate as shown.
Right Twig Installation

The right twig has two holes for the pins on the rear and right log.

When in place the right twig will appear as shown above.
Ember Installation

A bag of embers is provided to further enhance the firebox. Place the embers on the firebox floor and on the burner. Do not place embers over any of the burner holes or air channels.

Rock Wool Placement

The included rock wool is placed on top of the burner to enhance the glow from the burner. The rock wool works best when it is applied in a very thin, porous layer. The best method for applying the rock wool is to brush it on to the burner. Compress a clump of rockwool between your thumb and forefinger. Use a stiff brush to apply a thin layer of rockwool fibers onto the burner. Do not use the entire bag of rockwool. Use only a small amount and save the remainder. Over-use of rockwool will diminish the glow and may cause sooting or other adverse conditions.
**LP Conversion Instructions**

**WARNING**
This conversion kit shall be installed by a qualified service agency in accordance with the manufacturer’s instructions and all applicable codes and requirements of the authority having jurisdiction. If the information in these instructions is not followed exactly, a fire, explosion or production of carbon monoxide may result causing property damage, personal injury or loss of life. The qualified service agency is responsible for the proper installation of this kit. The installation is not proper and complete until the operation of the converted appliance is checked as specified in the manufacturer’s instructions supplied with the kit.

**Install the conversion kit prior to installing the gas line to ensure proper gas use.**
1. Remove the glass (see page 48). Remove the logs and embers (if installed - page 53)
2. Remove the burner (see illustration below).

Remove the rear burner.

Remove the front burner.

Remove the grate.

Remove the rear burner.
Finalizing the Installation  (for qualified installers only) 61

3. Follow the directions below to replace the orifice.

a. Slide the air shutters all the way to the right.

b. Remove and discard the front burner gasket (used only for NG installations).

c. Use a 1/2" open end wrench to unscrew the two orifices.

d. Apply thread sealant to the LP orifices prior to installation. Use the chart below to identify the correct orifices.

<table>
<thead>
<tr>
<th></th>
<th>NG</th>
<th>LP</th>
</tr>
</thead>
<tbody>
<tr>
<td>Front Burner</td>
<td>#56</td>
<td>#67</td>
</tr>
<tr>
<td>Rear Burner</td>
<td>#50</td>
<td>1.1</td>
</tr>
</tbody>
</table>

e. Screw each LP orifice in so the orifice protrudes 15/16" (24mm) (indicating full insertion).
4. Install the LP pilot orifice following the instructions below.
   (a) Use a 7/16” open-end wrench to remove the pilot hood.
   (b) Remove and discard the Natural Gas (NG) orifice. Place the LP orifice in the pilot assembly then replace the pilot hood, tightening the pilot hood until it is snug (do not over-tighten).

5. Remove and discard the screws (see “a” below) holding the stock regulator in place (see “b” below). Remove the stock regulator and gasket (see “c” below). Place the LP regulator in place, making sure the pre-fitted gasket (see “c” below) is in place.
   NOTE: There is a label on the base of the regulator knob indicating regulator type (NG or LP). Secure the regulator with the screws included with the regulator – tighten to 25 lb-in of torque (2.82 NM). Place the included label on the valve body where it can be easily seen to insure proper identification.
   NOTE: Leak-test this area after the heater is installed, gas is connected, and the main burner is lit.

6. **Replace the firebox components.** Install the logs and embers. Replace the glass.
7. Make the gas line connection, bleed the gas line (if applicable), start the heater and thoroughly leak-test all gas connections and the gas control valve.
**WARNING**
Turn off gas to the appliance and make sure it has fully cooled prior to conducting service.

1. Remove the glass frame and logs.

2. Remove the grate (replace after fireback installation). Remove and discard the hearth plate.

3. Install the firebacks following the directions below. Select either the straight brick or herringbone brick pattern to face outwards.

**NOTE:**
Due to the construction of the ceramic firebacks, you may need to reposition the firebacks to achieve the correct alignment.

4. Restore the fireplace to the correct configuration.

---

**Fireback Installation**

**WARNING**
Turn off gas to the appliance and make sure it has fully cooled prior to conducting service.

1. Remove the glass frame and logs.

2. Remove the grate (replace after fireback installation). Remove and discard the hearth plate.

3. Install the firebacks following the directions below. Select either the straight brick or herringbone brick pattern to face outwards.

**NOTE:**
Due to the construction of the ceramic firebacks, you may need to reposition the firebacks to achieve the correct alignment.

4. Restore the fireplace to the correct configuration.
Grill Installation

**Note:** Install the barrier screen before attaching the grills.

Follow the directions below to install.

**Upper Grill Installation (FPX and Avalon)**

Hold the grill at an angle and insert the lower slot over the lower bushing on the fireplace (both sides). The grill fits inside the tabs for the barrier screen.

Swing the grill upwards to engage the upper slot. You will need to lift the grill slightly to get it over the bushing. Once in place the grill is held in place by gravity.

**Lower Grill Installation**

Hold the grill at an angle and insert the lower slot over the bushing on the fireplace (both sides). You may need to press on the grill to get the tab over the bushing (this prevents the grill from accidentally falling off).

Bend the tab outward on both sides. This is the end-stop for the lower grill, it allows the grill to swing forward.

Swing the grill upwards to engage the upper slot. The grill fits inside the tabs for the barrier screen. You will need to lift the grill slightly to get it over the bushing. Once in place the grill is held in place by gravity.

**Upper Grill Installation (Lopi)**

*NOTE: The upper grill is difficult to install the first time - be patient, after you install it, you will know how it installs and it will be much easier the second time.*

**SIDE VIEW**

Position the grill so the slots on the grill align with the mounting studs.

You may need to push in and upwards on the grill as it inserts.

The grill, when fully inserted, will slide down and "click" into place.
GS2 Remote Installation

Packing List
- Transmitter
- Battery Box
- Remote Wall Mount with Attachment Screws and Anchors
- Stepper Motor
- Torx Wrench
- Remote Control DVD
- GSR2 IFC
- Splitflow Harness (attached to IFC)
- System Jumper (attached to IFC)
- Battery Box Harness (attached to IFC)
- Fan/Light Harness (attached to IFC)
- (2) Jumper Wires
- (2) 4” Cable Ties

Warnings

⚠️ Turn off power to the heater (unplug or turn off at the breaker).

⚠️ Shut off gas at the appliance (or at meter).

HINT:
If using a blower, make sure to have it on hand while installing the remote.

Remote Control / Pilot Warnings

⚠️ Installing batteries in the battery holder or connecting the appliance to power may automatically initiate the CPI pilot mode, resulting in a lit pilot flame. Do not place combustibles in the firebox.

**KEEP BATTERIES AND COVER INSTALLED AT ALL TIMES**

The remote control system requires the batteries and battery cover to remain in place at all times. Once the batteries or cover are removed, the system may re-start in standing pilot mode. If this occurs when the heater is in Remote Mode, you will not be able to turn the heater off manually from the battery box.

If you need to replace dead batteries, make sure to **turn the appliance off** before removing the batteries.

NOTE: If the batteries go dead, the system will operate normally as long as household power (120v AC) is present.

Installation

1. Remove the concealment cover from the heater and set aside.

2. Remove the On/Off–Comfort Control–Battery Plate from the control panel (keep the screws).
3. Remove the control panel and place face-down in front of the heater (keep the screws).

4. Disconnect input power.

5. Disconnect the ground wire.
6. Pull the base IFC forward to access the wiring (it is held in place with Velcro).

7. Disconnect the comfort control wires and battery backup wires from the battery holder.
8. Disconnect the following:

- Power (3 wires)
- Main harness
- On/Off wires
- Pilot connections (slide silicone tubing up)

9. Remove and place aside the base IFC (it may be kept for spare parts).
10. Remove and place aside the On/Off-Comfort Control-Battery Plate with harness (the batteries and assembly may be kept for spare parts).
11. Remove and discard the screws (see “a” below) holding the stock regulator in place (see “b” below). Remove and discard the stock regulator, spring, and gasket (see “c” below).
12. The stepper motor (adjustable regulator) has an installation sheet included with it – make sure to follow all of the directions. Place the stepper motor on the gas control valve (see below) – **MAKE SURE IT IS CORRECTLY ORIENTED**. Secure using the screws included with the motor – tighten to 25 Lb-inches. Leak-test this area after installation to verify proper installation. Route the stepper motor wire near the IFC location.
Instructions for Using the Optional Blower with GS2 Remote

When using the Greensmart™ 2 remote, the power for the blower will be routed through the fuse and IFC, bypassing the rheostat and snap disc included with the blower kit.

Order of Installation

Install the blower assemblies with the IFC removed (see instructions included with the blower for details). Connect the wiring as shown below, attaching the power input to the IFC after the IFC is placed in location (see “e” below).

Wiring the Blower to the GSR2 IFC (Bypassing the Rheostat and Snap Disc)

Disconnect the blower power input (see “a” below). Connect the blower wiring harness to the fuse output (see “b” below). Disconnect and discard the electrical line intended to connect the snap disk to the rheostat (carefully remove the wire tie from the wiring harness – see “c”). Attach the jumper wire (included with the remote) to the wires labeled “SNAP DISC” (see “d” below). Attach the blower power input (see “e”) to “FAN” lead on the fuse harness (pre-connected to the IFC). This circuit bypasses the rheostat and snap disc (these components included with the blower kit are not used and may be kept for replacement part purposes).
Optional Equipment  (for qualified installers only)

13. Wire the accent light for remote operation.

When using the GreenSmart™ 2 remote, the power for the accent light(s) will be routed through the fuse and IFC, bypassing the rheostat.

Order of Installation
Connect the wiring with the IFC removed as shown below. Attach the power input to the IFC after the IFC is placed in location (see “a” below).

Wiring the Blower to the GSR2 IFC (Bypassing the Rheostat)
Disconnect the accent light power input (see “a” below). Disconnect the two wires leading to the rheostat and attach them together (see “b” below). Remove the rheostat from the control panel (see “c” below). Attach the accent light power input (see “d”) to “LIGHT” lead on the fuse harness (pre-connected to the IFC). This circuit bypasses the rheostat (this component is not used and may be kept for replacement part purposes).

14. Place the GSR2 IFC near the appliance.

NOTE:
On newer units the comfort control (splitflow) jumper is removed and discarded. It is not needed because the splitflow wire connects directly to the IFC.
15. Attach the following:

- Power (3 wires – make sure orientation is correct)
- Make sure silicone tubing is pushed down
- Comfort Control connection
- Main Harness
- Stepper Motor
16. Disconnect the IPI/CP switch from IPI/CP wires. Attach one of the jumper wires to the two wires. Discard the IPI/CP switch.

17. Remove the IPI/CPI switch and place aside (may be kept for spare parts).

18. Connect the accent light wires to the GSR2 IFC.

NOTE: If using a blower, connect the power input to the GSR2 IFC.

19. Connect the battery box power molex connector to the main harness molex connector.
20. Route the battery box harness through the control panel and attach to the battery box.

21. Place the IFC in location inside the heater and attach using the applied velcro tape.
22. Re-connect the ground wire.
23. Use the two included cable ties to make sure all wiring is secure and does not contact any hot or moving parts.
24. Attach the control panel.
25. Attach the battery box to the control panel using the screws removed in step 2.

26. Re-connect the input power input.

27. Restore the fireplace to the correct configuration (turn power and gas on).

See the instructions included with the remote for synchronizing the remote and operating instructions.
